

A background image of a camel race in progress. Several camels are galloping across a sandy track, with riders seated on their backs. The riders are wearing helmets and some are holding long poles. The scene is set against a clear sky.

Camel Integration with Spring Boot and Red Hat Fuse on OpenShift

Claus Ibsen
@davsclaus

Red Hat Summit
May 2018

About me

- Senior Principal Software Engineer at Red Hat
- 10 years as Apache Camel committer
- Author of Camel in Action books
- Based in Denmark

System Integration

Figure 1.1 Camel is the glue between disparate systems.

Integration Framework

APACHE®

Camel

PATTERN BASED INTEGRATION

Apache Camel, a powerful pattern-based integration engine with a comprehensive set of connectors and data formats to tackle any integration problem.

ENTERPRISE INTEGRATION PATTERNS

Build integrations using enterprise best practices.

200+ COMPONENTS

Batch, messaging, web services, cloud, APIs, and more ...

BUILT-IN DATA TRANSFORMATION

JSON, XML, HL7, YAML, SOAP, Java, CSV, and more ...

INTUITIVE ROUTING

Develop integrations quickly in Java or XML.

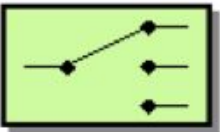

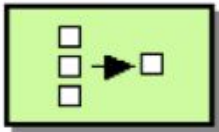

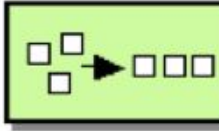

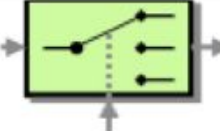

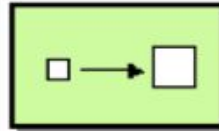

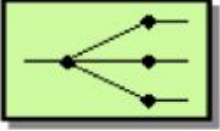

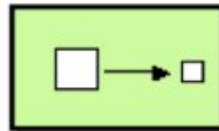

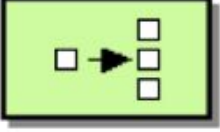

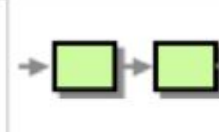

NATIVE REST SUPPORT

Create, connect, and compose APIs with ease.

Enterprise Integration Patterns

Enterprise Integration Patterns

	Content Based Router		Aggregator
	Message Filter		Resequencer
	Dynamic Router		Content Enricher
	Recipient List		Content Filter
	Splitter		Pipes and Filters

Camel Routes

```
from("file:data/inbox")  
  .to("jms:queue:order");
```

Java DSL

XML DSL

```
<route>  
  <from uri="file:data/inbox"/>  
  <to uri="jms:queue:order"/>  
</route>
```

Camel Routes with Splitter

Camel Routes with Splitter

```
from("file:inbox")
```

Camel Routes with Splitter

```
from("file:inbox")  
    .split(body().tokenize("\n"))
```

Camel Routes with Splitter

```
from("file:inbox")  
    .split(body().tokenize("\n"))  
    .marshal(customToXml)
```

Custom data
transformation

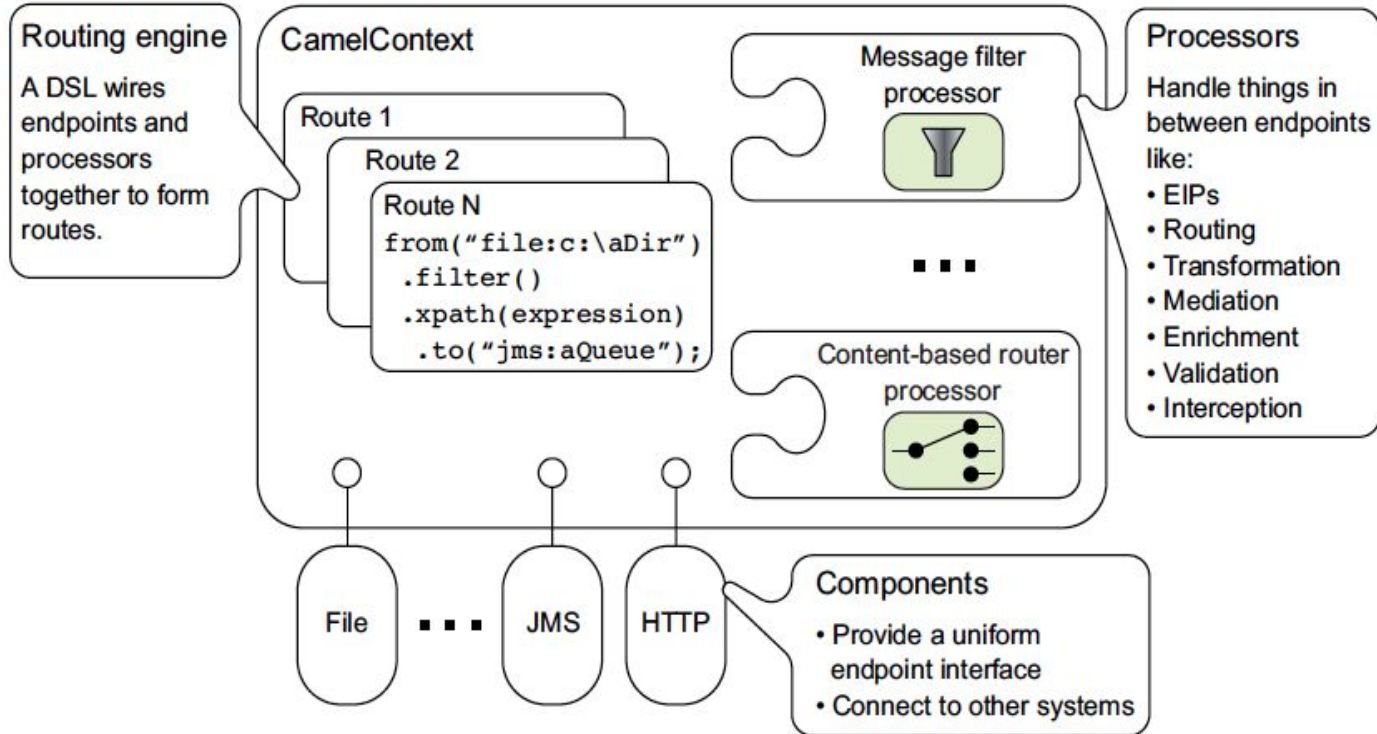

Camel Routes with Splitter

```
from("file:inbox")  
    .split(body().tokenize("\n"))  
    .marshal(customToXml)  
    .to("activemq:line");
```

Custom data
transformation

Camel Architecture

Camel runs everywhere

Application
Servers

Linux
Containers

Camel connects everything

**Enterprise
Systems**

IoT

- File
- FTP
- JMS
- AMQP
- JDBC
- SQL
- TCP/UDP
- Mail
- HDFS
- JPA
- MongoDB
- Kafka
- ...

- CoAP
- MQTT
- PubNub

- AWS
 - S3
 - SQS
 - Kinesis
 - ...
- Google
 - BigQuery
 - PubSub
- Azure
 - Blob
 - Queue

- Box
- Dropbox
- Facebook
- LinkedIn
- Salesforce
- SAP
- ServiceNow

What about Camel on OpenShift?

Monolith

Microservices

Microservices

Microservices

Microservices

Microservices

Microservices

Network of Services

Microservices == Distributed Computing

Microservices'ilities

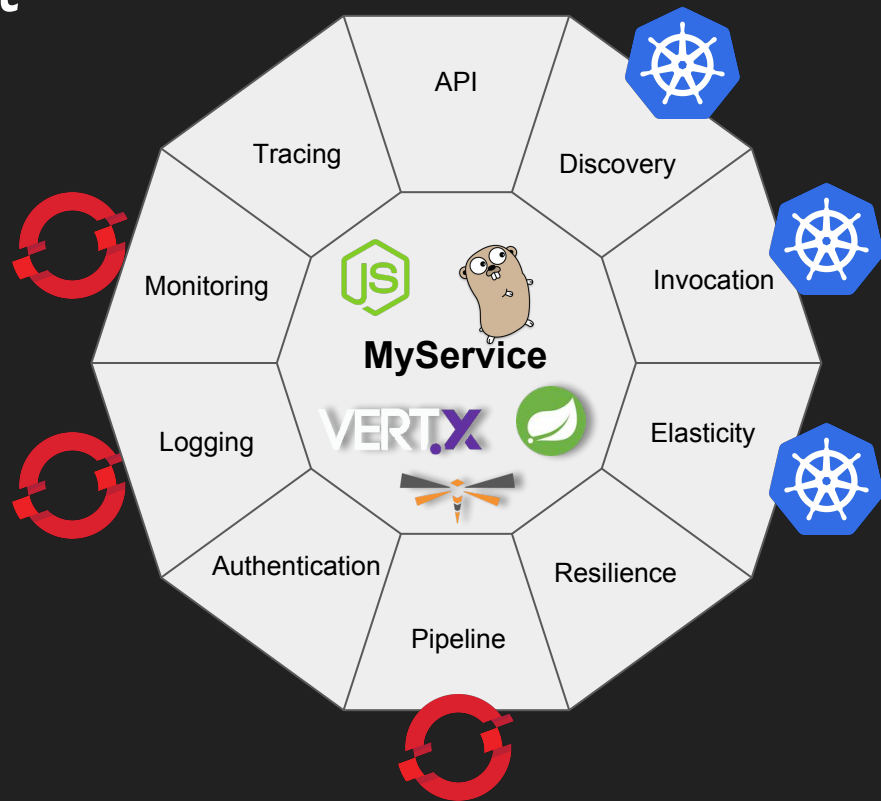

Microservices'ilities + Kubernetes

Microservices'ilities + OpenShift

Microservices'ilities + Istio

Microservices'ilities + API management

But where is Camel?

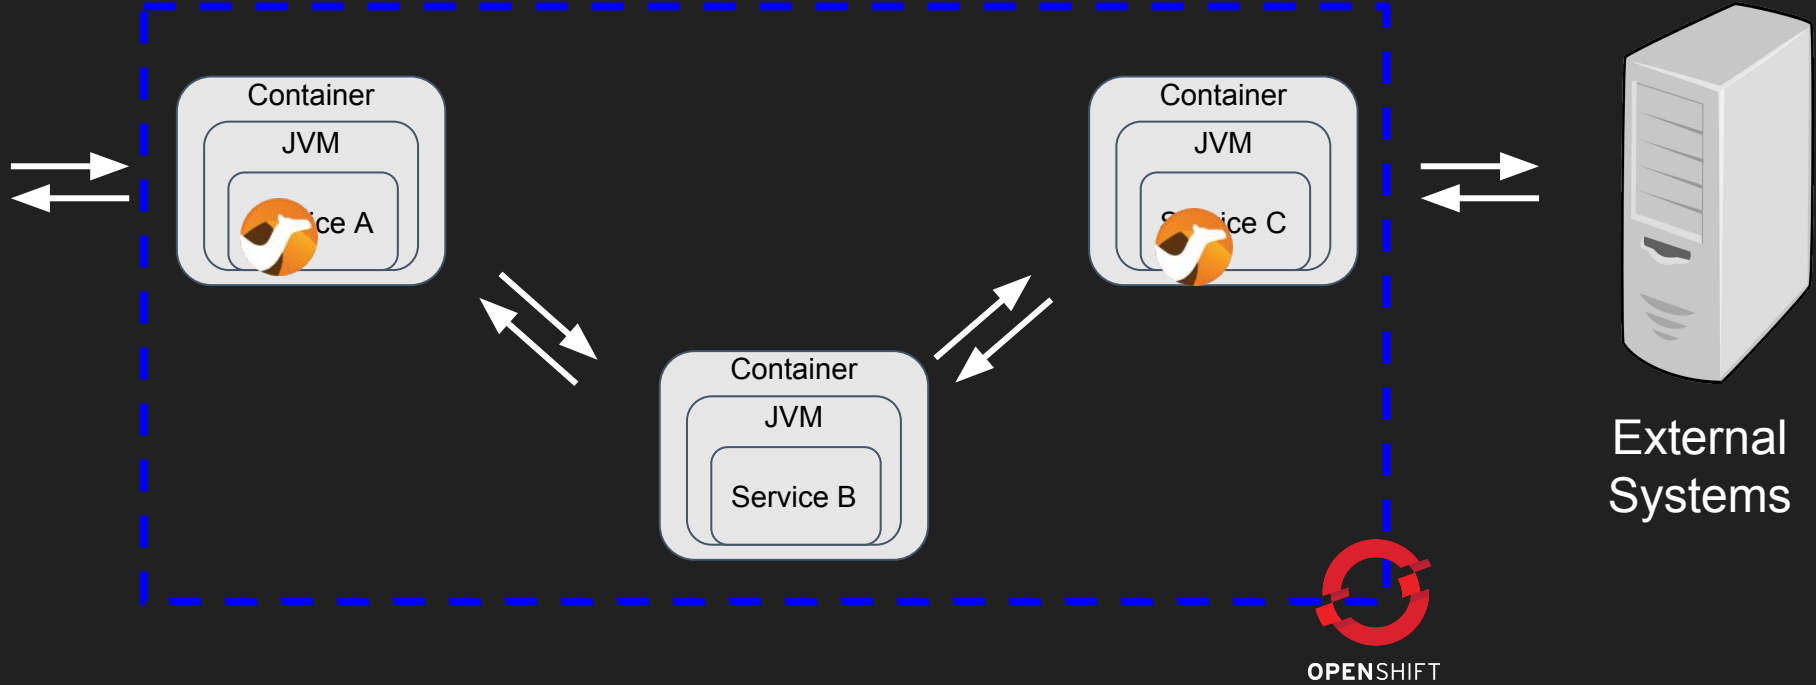

But where is Camel?

Microservices == Distributed Integration

Microservices == Distributed Integration

THE THREE PILLARS OF AGILE INTEGRATION

Key foundational capabilities needed by today's enterprises

DISTRIBUTED INTEGRATION

- LIGHTWEIGHT
- PATTERN BASED
- EVENT ORIENTED
- COMMUNITY SOURCED

FLEXIBILITY

CONTAINERS

- CLOUD NATIVE SOLUTIONS
- LEARN ARTIFACTS,
INDIVIDUALLY DEPLOYABLE
- CONTAINER BASED SCALING
AND HIGH AVAILABILITY

SCALABILITY

APIs

- WELL DEFINED, REUSABLE,
AND WELL MANAGED
END-POINTS
- ECOSYSTEM LEVERAGE

RE-USABILITY

Camel in the Cloud

Best Practice - Small in Size

- Camel is light-weight
 - (camel-core 4mb)
 - + what you need
- Single fat-jar via:

Best Practice - Stateless

- Favour stateless applications
- If state is needed:
 - Data-grid
 - camel-infinispan
 - camel-hazelcast
 - camel-ignite
 - ...
 - Storage
 - camel-sql
 - camel-jpa
 - camel-kafka
 - ...
 - Kubernetes
 - Stateful-set

Best Practice - Configuration Management

- Kubernetes ConfigMap
 - Inject via ENV
 - Inject via files
- Kubernetes Secrets
 - inject via ENV
 - Inject via files

```
// inject configuration via spring-style @Value  
@Value("${fallback}")  
private String fallback;
```

```
.simple( text: "{{fallback}}")
```

```
$ kubectl get cm -o yaml my-configmap  
apiVersion: v1  
data:  
  fallback: I still got no response  
kind: ConfigMap
```

Best Practice - Fault Tolerant

- Camel Retry
 - onException
 - errorHandler
- Camel Hystrix
 - circuit breaker

Best Practice - Fault Tolerant

- Camel Retry
 - `onException`
 - `errorHandler`

```
onException(Exception.class)  
    .maximumRedeliveries(10)  
    .redeliveryDelay(1000);
```

Best Practice - Fault Tolerant

- Camel Retry
 - `onException`
 - `errorHandler`

Figure by Christian Posta

Best Practice - Health Checks

- Health Checks
 - camel-spring-boot actuator
 - wildfly-swarm monitor

- Readiness Probe
 - Kubernetes

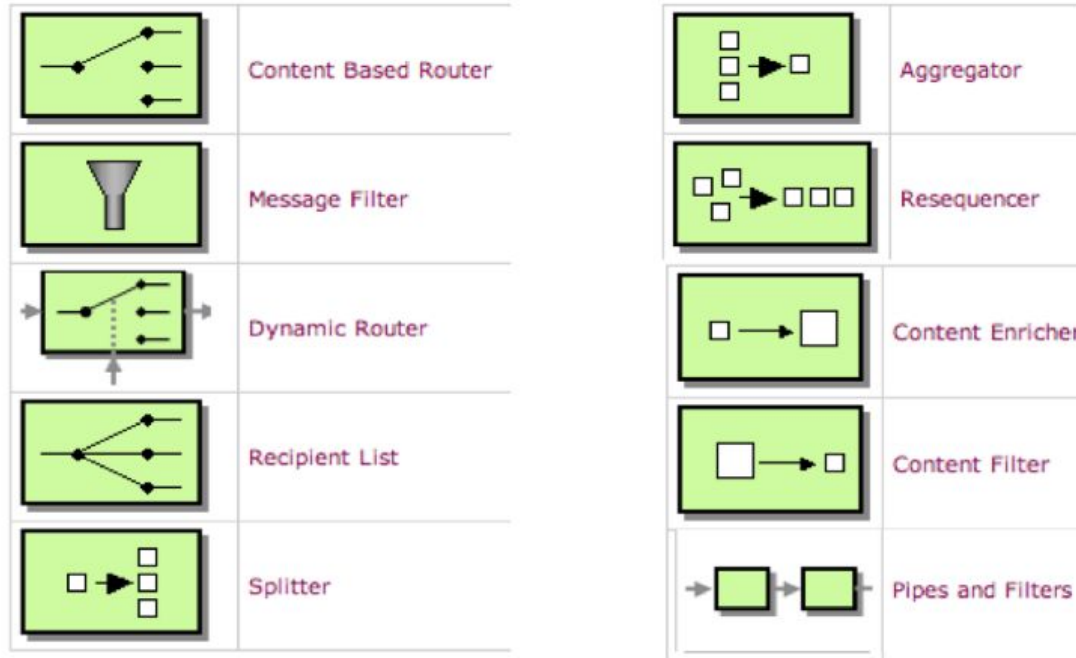

- Liveness Probe
 - Kubernetes

```
{
  status: "UP",
  - camel: {
    status: "UP",
    name: "camel-1",
    version: "2.20.2",
    contextStatus: "Started",
  },
  - camel-health-checks: {
    status: "UP",
    route:routel: "UP",
  },
  - diskSpace: {
    status: "UP",
    total: 19195224064,
    free: 5747757056,
    threshold: 10485760,
  },
}
```

Best Practice - EIP Patterns

- Works anywhere

Plugins

- Consul
- Etcd
- Kubernetes
- Ribbon
- Zookeeper

EIP Cloud Patterns

Service Call

Figure 17.9 A timer ① triggers the Service Call EIP ② to call a clustered service. The physical locations of the service are looked up in the service registry ③. The service is then called in a round-robin fashion by calling either Foo server ④ or Bar server ⑤.

```
from("timer")
    .serviceCall("hello-service");
```

EIP Cloud Patterns

Hystrix EIP

```
from("timer:foo")
  .hystrix()
    .to("http:myservice")
  .onFallback()
    .to("bean:myfallback")
  .end()
```

EIP Cloud Patterns

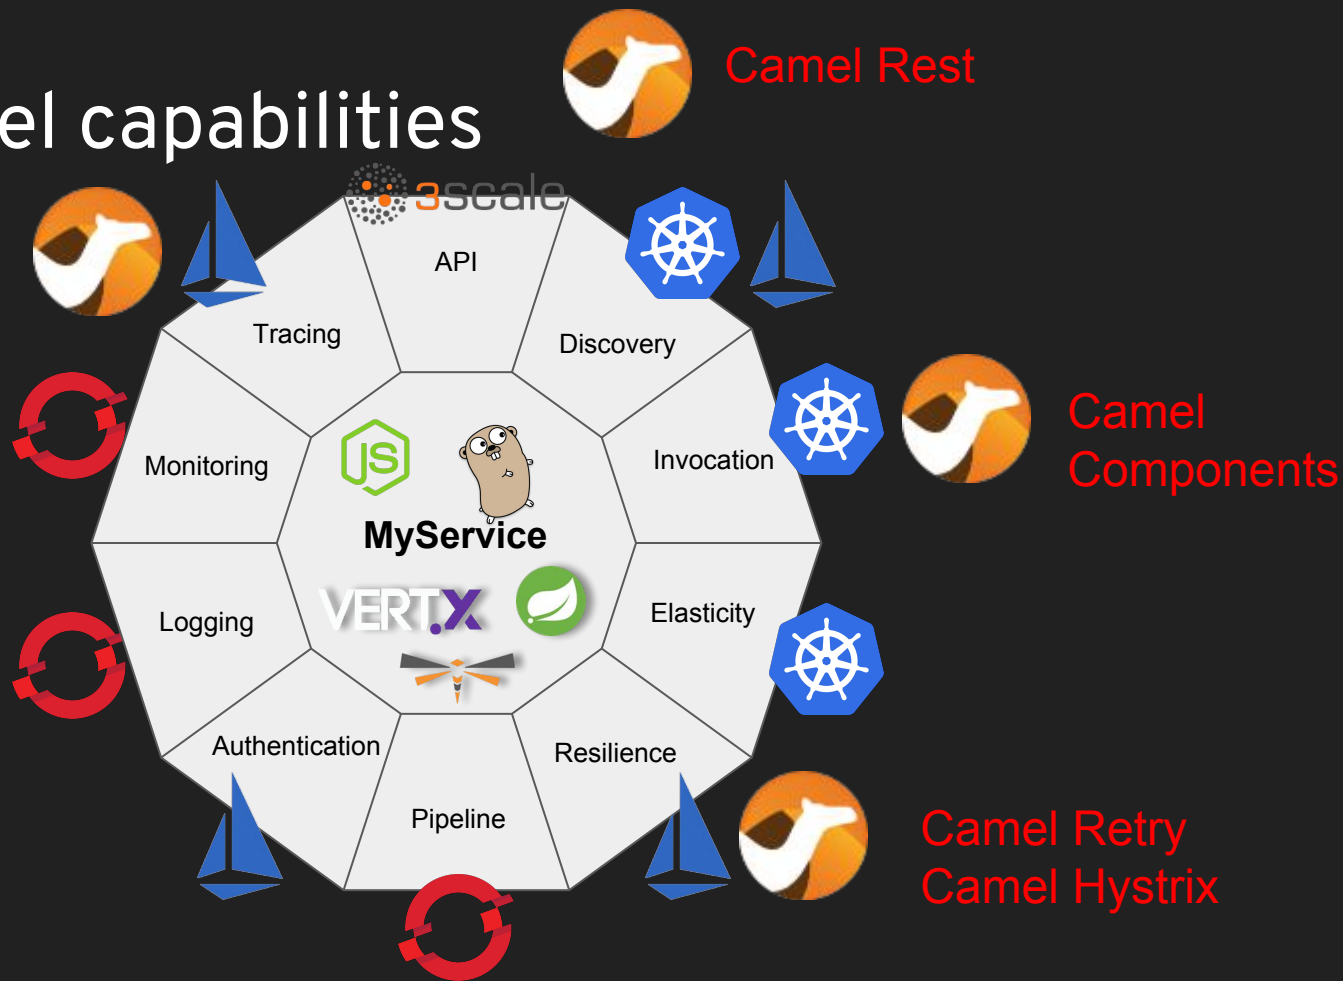

Distributed
Tracing

Usable Camel capabilities

Camel Zipkin
Camel OpenTracing
