

A background image of a camel race in progress. Several camels are galloping across a sandy track, with riders in traditional white and red attire. The scene is captured in a dynamic, slightly blurred style to convey speed.

# Camel Integration with Spring Boot and Red Hat Fuse on OpenShift

Claus Ibsen  
@davsclaus

Red Hat Summit  
May 2018

# About me

- Senior Principal Software Engineer at Red Hat
- 10 years as Apache Camel committer
- Author of Camel in Action books
- Based in Denmark

# System Integration

**Figure 1.1** Camel is the glue between disparate systems.

# Integration Framework

APACHE®  
Camel

# PATTERN BASED INTEGRATION

Apache Camel, a powerful pattern-based integration engine with a comprehensive set of connectors and data formats to tackle any integration problem.

## ENTERPRISE INTEGRATION PATTERNS

Build integrations using enterprise best practices.

## 200+ COMPONENTS

Batch, messaging, web services, cloud, APIs, and more ...

## BUILT-IN DATA TRANSFORMATION

JSON, XML, HL7, YAML, SOAP, Java, CSV, and more ...

## INTUITIVE ROUTING

Develop integrations quickly in Java or XML.

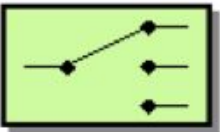

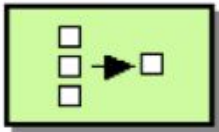

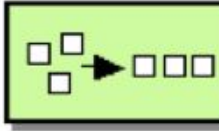

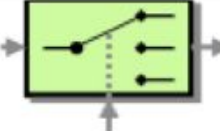

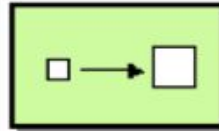

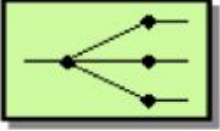

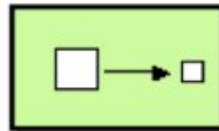

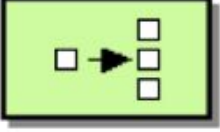

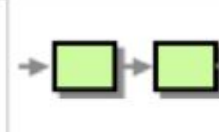

## NATIVE REST SUPPORT

Create, connect, and compose APIs with ease.

# Enterprise Integration Patterns

# Enterprise Integration Patterns

	Content Based Router		Aggregator
	Message Filter		Resequencer
	Dynamic Router		Content Enricher
	Recipient List		Content Filter
	Splitter		Pipes and Filters

# Camel Routes

```
from("file:data/inbox")  
  .to("jms:queue:order");
```

Java DSL

XML DSL

```
<route>  
  <from uri="file:data/inbox"/>  
  <to uri="jms:queue:order"/>  
</route>
```

# Camel Routes with Splitter

# Camel Routes with Splitter

```
from("file:inbox")
```

# Camel Routes with Splitter

```
from("file:inbox")  
    .split(body().tokenize("\n"))
```

# Camel Routes with Splitter

```
from("file:inbox")  
    .split(body().tokenize("\n"))  
    .marshal(customToXml)
```

Custom data  
transformation

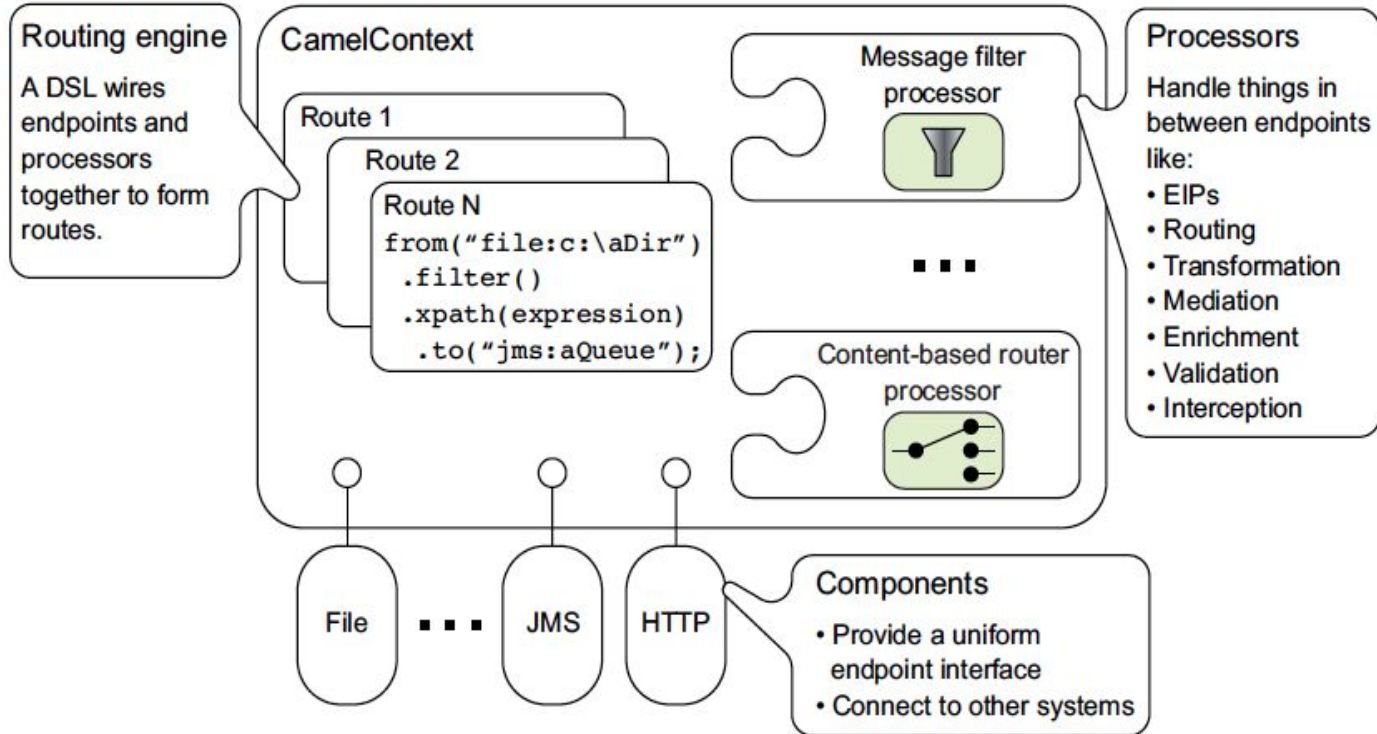

# Camel Routes with Splitter

```
from("file:inbox")
    .split(body().tokenize("\n"))
    .marshal(customToXml)
    .to("activemq:line");
```

Custom data  
transformation

# Camel Architecture

# Camel runs everywhere

Application  
Servers

Linux  
Containers

# Camel connects everything

**Enterprise  
Systems**

**IoT**

- File
- FTP
- JMS
- AMQP
- JDBC
- SQL
- TCP/UDP
- Mail
- HDFS
- JPA
- MongoDB
- Kafka
- ...

- CoAP
- MQTT

**What about Camel  
on OpenShift?**

# Monolith

# Microservices

# Microservices

# Microservices

# Microservices

# Microservices

# Microservices

# Network of Services

# Microservices == Distributed Computing

# Microservices'ilities

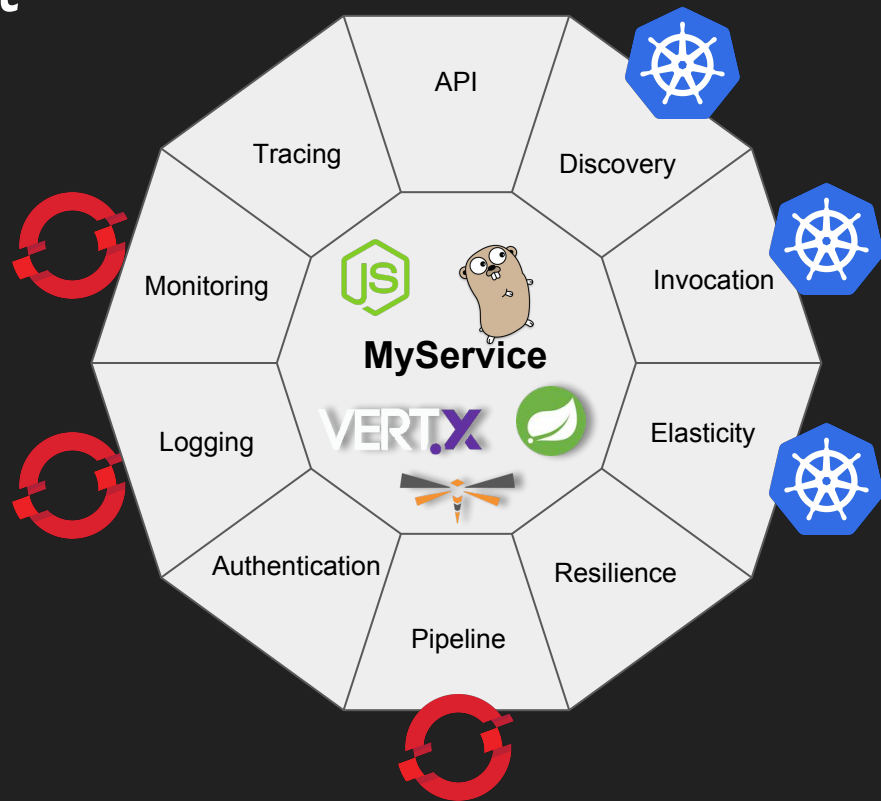

# Microservices'ilities + Kubernetes

# Microservices'ilities + OpenShift

# Microservices'ilities + Istio

# Microservices'ilities + API management

# But where is Camel?

# But where is Camel?

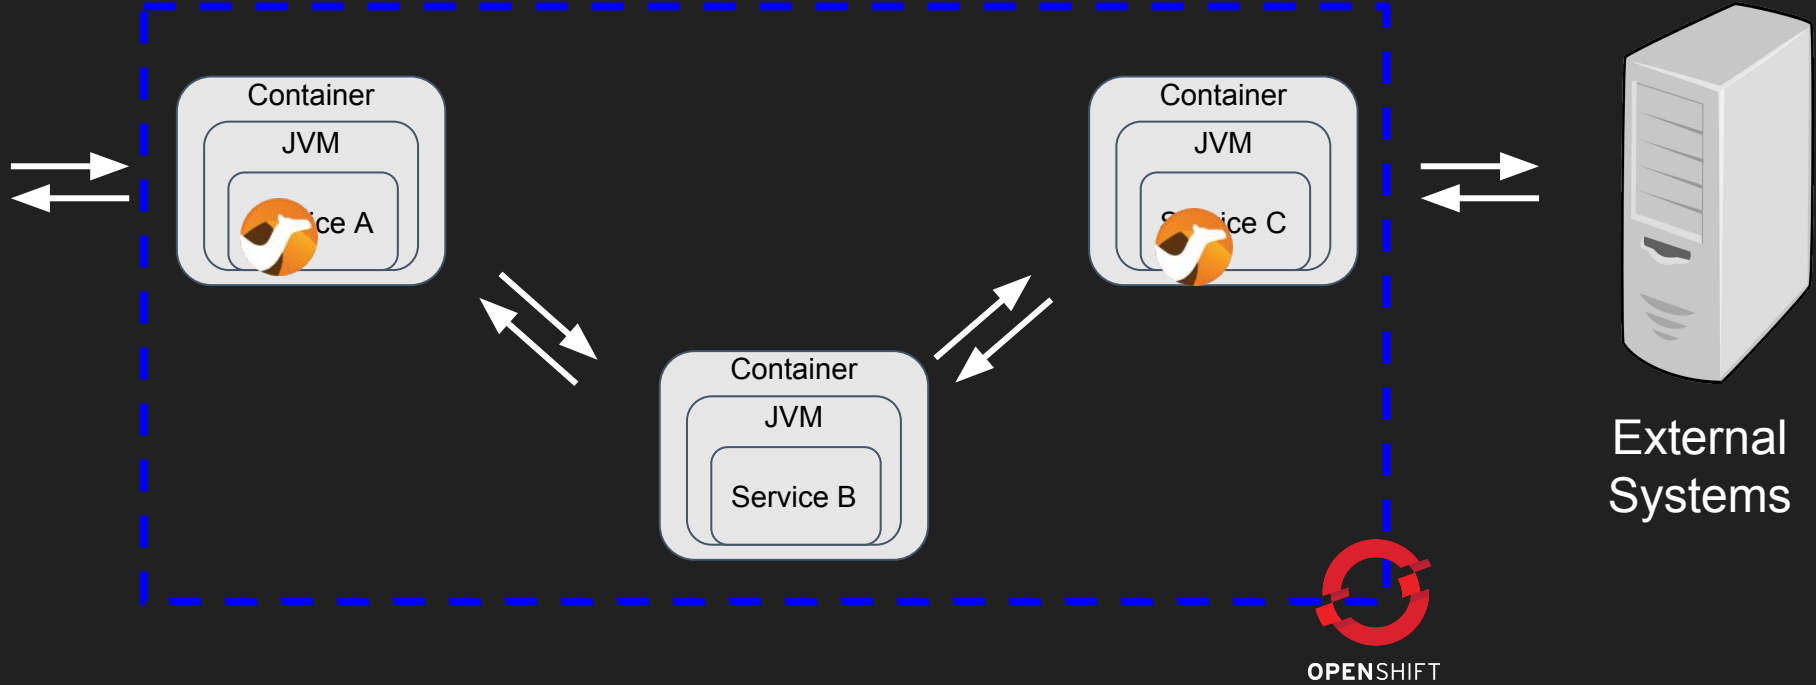

# Microservices == Distributed Integration

# Microservices == Distributed Integration

# THE THREE PILLARS OF AGILE INTEGRATION

Key foundational capabilities needed by today's enterprises

## DISTRIBUTED INTEGRATION

---

- LIGHTWEIGHT
- PATTERN BASED
- EVENT ORIENTED
- COMMUNITY SOURCED

## FLEXIBILITY

## CONTAINERS

---

- CLOUD NATIVE SOLUTIONS
- LEARN ARTIFACTS,  
INDIVIDUALLY DEPLOYABLE
- CONTAINER BASED SCALING  
AND HIGH AVAILABILITY

## SCALABILITY

## APIs

---

- WELL DEFINED, REUSABLE,  
AND WELL MANAGED  
END-POINTS
- ECOSYSTEM LEVERAGE

## RE-USABILITY

# Camel in the Cloud

# Best Practice - Small in Size

- Camel is light-weight
  - (camel-core 4mb)
  - + what you need
- Single fat-jar via:

# Best Practice - Stateless

- Favour stateless applications
- If state is needed:
  - Data-grid
    - camel-infinispan
    - camel-hazelcast
    - camel-ignite
    - ...
  - Storage
    - camel-sql
    - camel-jpa
    - camel-kafka
    - ...
  - Kubernetes
    - Stateful-set

# Best Practice - Configuration Management

- Kubernetes ConfigMap
  - Inject via ENV
  - Inject via files
- Kubernetes Secrets
  - inject via ENV
  - Inject via files

```
// inject configuration via spring-style @Value  
@Value("${fallback}")  
private String fallback;
```

```
.simple( text: "{{fallback}}")
```

```
$ kubectl get cm -o yaml my-configmap  
apiVersion: v1  
data:  
  fallback: I still got no response  
kind: ConfigMap
```

# Best Practice - Fault Tolerant

- Camel Retry
  - `onException`
  - `errorHandler`
- Camel Hystrix
  - circuit breaker

# Best Practice - Fault Tolerant

- Camel Retry
  - `onException`
  - `errorHandler`

```
onException(Exception.class)  
    .maximumRedeliveries(10)  
    .redeliveryDelay(1000);
```

# Best Practice - Fault Tolerant

- Camel Retry
  - `onException`
  - `errorHandler`

Figure by Christian Posta

# Best Practice - Health Checks

- Health Checks
  - camel-spring-boot actuator
  - wildfly-swarm monitor

- Readiness Probe
  - Kubernetes

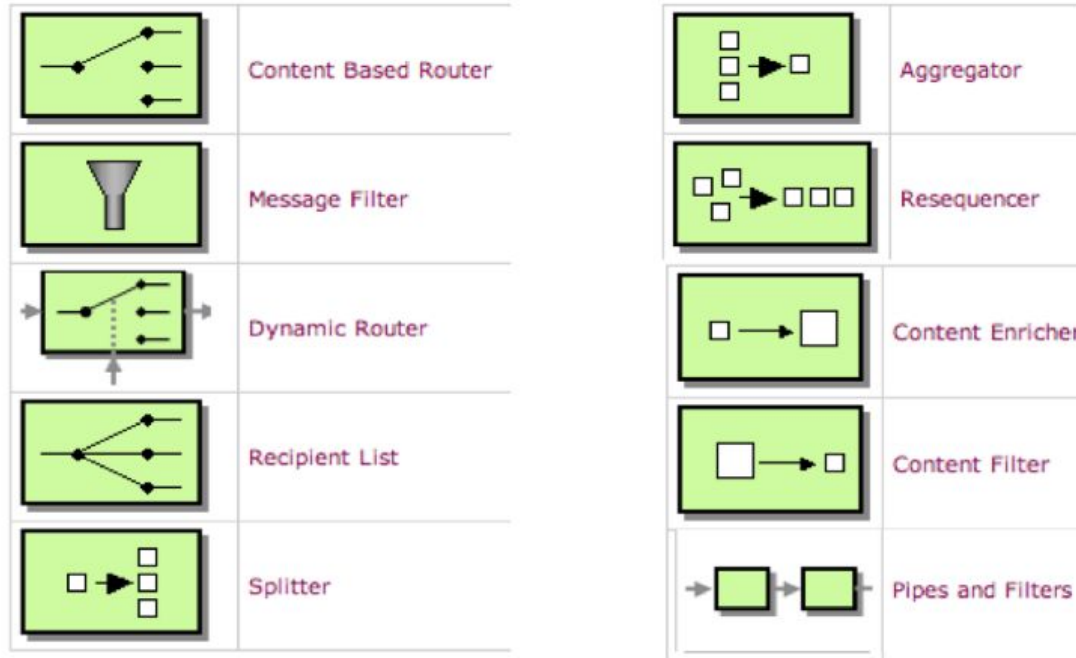

- Liveness Probe
  - Kubernetes

```
{
  status: "UP",
  - camel: {
    status: "UP",
    name: "camel-1",
    version: "2.20.2",
    contextStatus: "Started",
  },
  - camel-health-checks: {
    status: "UP",
    route:routel: "UP",
  },
  - diskSpace: {
    status: "UP",
    total: 19195224064,
    free: 5747757056,
    threshold: 10485760,
  },
}
```

# Best Practice - EIP Patterns

- Works anywhere

## Plugins

- Consul
- Etcd
- Kubernetes
- Ribbon
- Zookeeper

# EIP Cloud Patterns

Service Call

Figure 17.9 A timer ① triggers the Service Call EIP ② to call a clustered service. The physical locations of the service are looked up in the service registry ③. The service is then called in a round-robin fashion by calling either Foo server ④ or Bar server ⑤.

```
from("timer")
    .serviceCall("hello-service");
```

# EIP Cloud Patterns

Hystrix EIP

```
from("timer:foo")
    .hystrix()
      .to("http:myservice")
    .onFallback()
      .to("bean:myfallback")
    .end()
```

# EIP Cloud Patterns

Saga EIP

```
rest().post("train/buy/seat")
    .saga()
      .compensation("direct:cancel")
      ...
    .to("http:trainservice/buy")
```
