### **System Integration**

Figure 1.1 Camel is the glue between disparate systems.

## **Integration Framework**

#### PATTERN BASED INTEGRATION

Apache Camel, a powerful pattern-based integration engine with a comprehensive set of connectors and data formats to tackle any integration problem.

ENTERPRISE INTEGRATION PATTERNS

Build integrations using enterprise best practices.

200+ COMPONENTS

Batch, messaging, web services, cloud, APIs, and more ...

BUILT-IN DATA TRANSFORMATION

JSON, XML, HL7, YAML, SOAP, Java, CSV, and more ...

INTUITIVE ROUTING

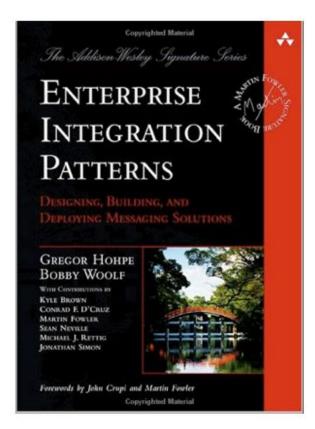

Develop integrations quickly in Java or XML.

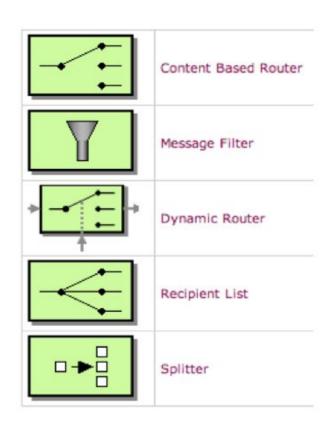

NATIVE REST SUPPORT

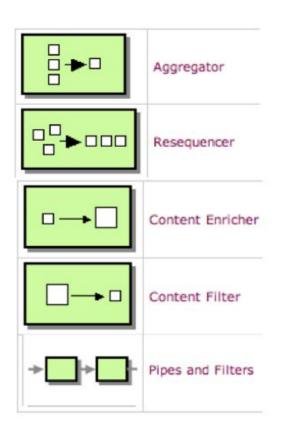

Create, connect, and compose APIs with ease.

### **Enterprise Integration Patterns**

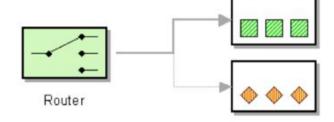

### **Enterprise Integration Patterns**

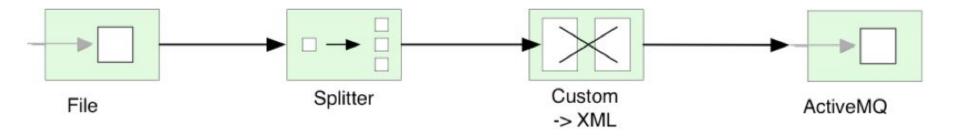

#### **Camel Routes**

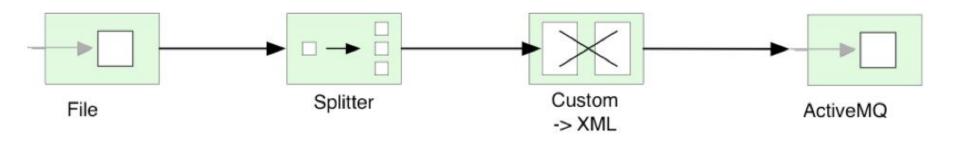

```
from("file:data/inbox")
   .to("jms:queue:order");
```

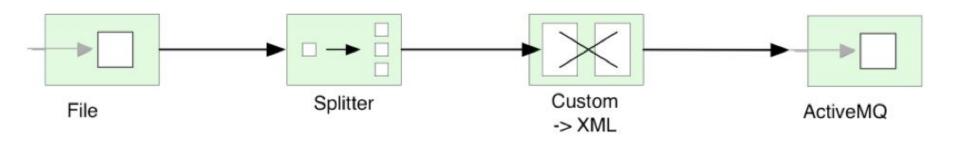

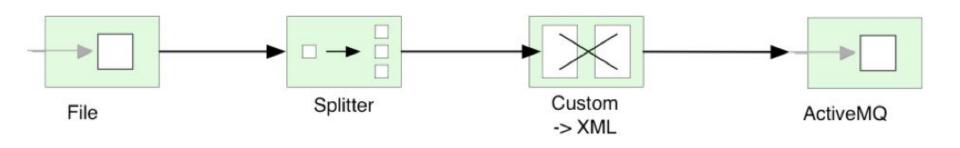

```
<pr
```

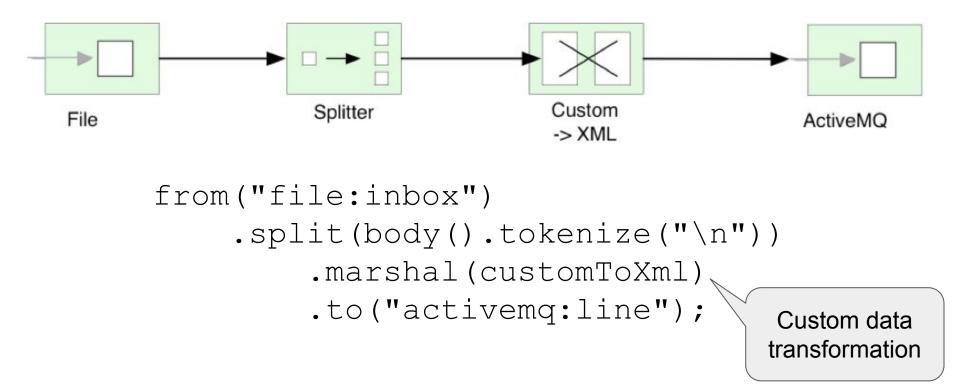

from("file:inbox")

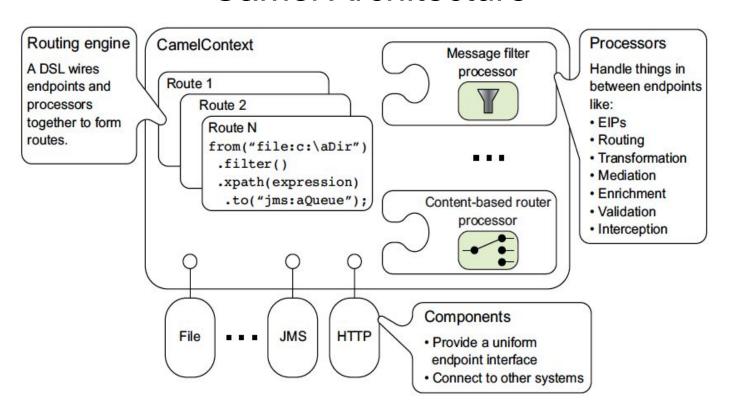

```
from("file:inbox")
    .split(body().tokenize("\n"))
    .marshal(customToXml)
```

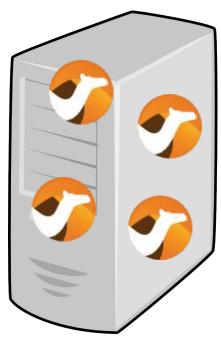

Custom data transformation

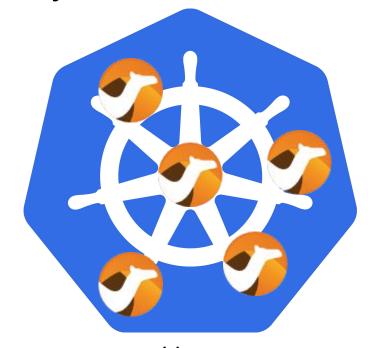

#### Camel Architecture

### Camel runs everywhere

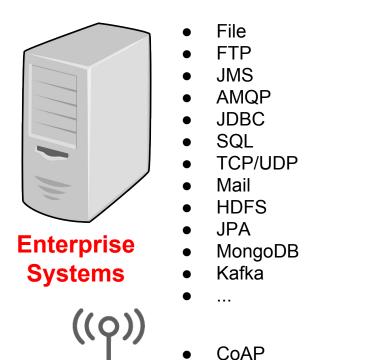

Application Servers

Linux Containers

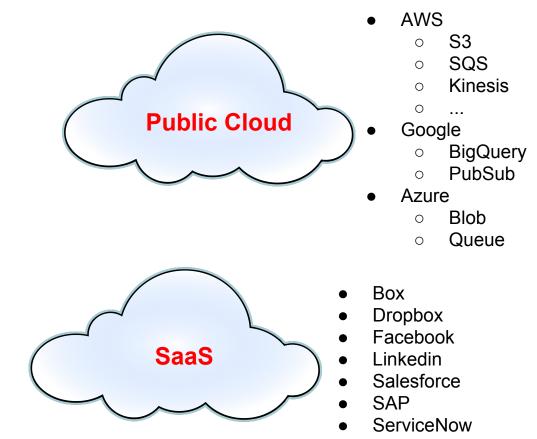

#### Camel connects everything

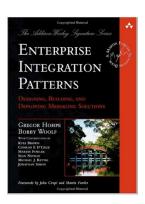

**IoT** 

**MQTT** 

**PubNub** 

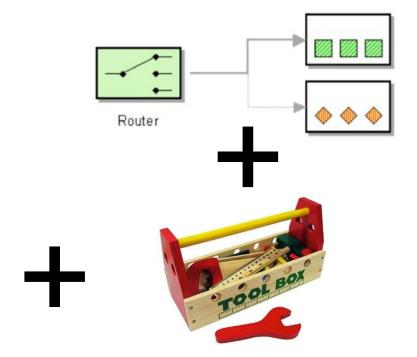

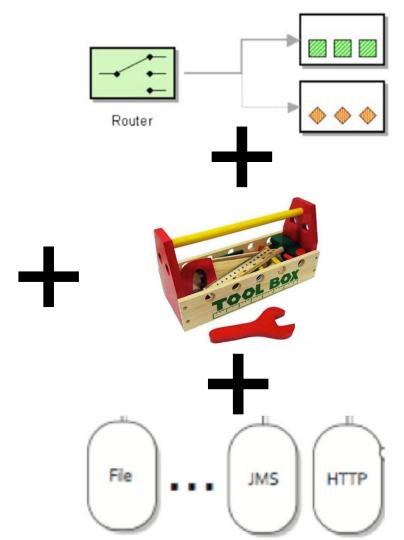

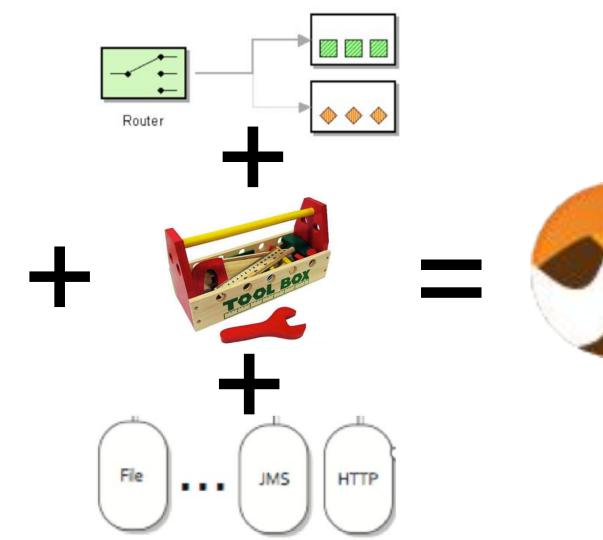

Enterprise Integration Patterns

Enterprise Integration Patterns

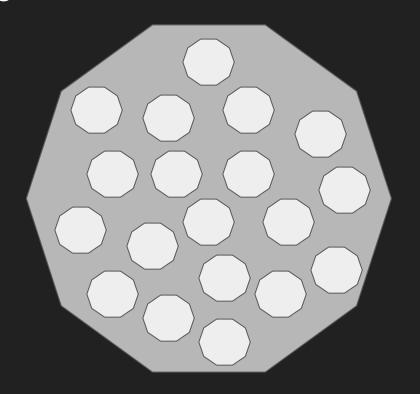

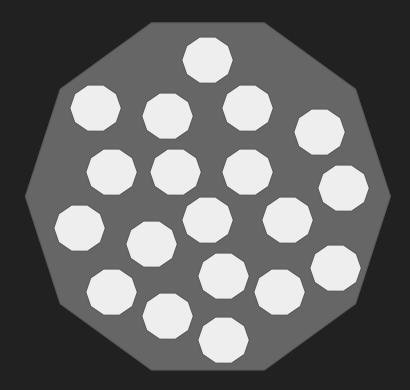

Enterprise Integration Patterns

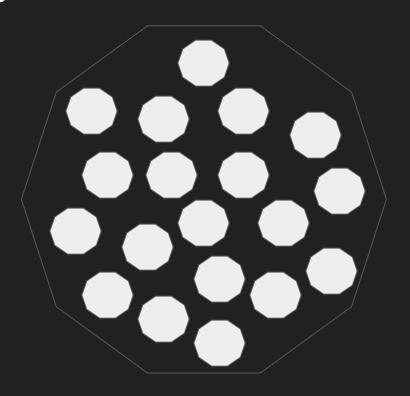

### Monolith

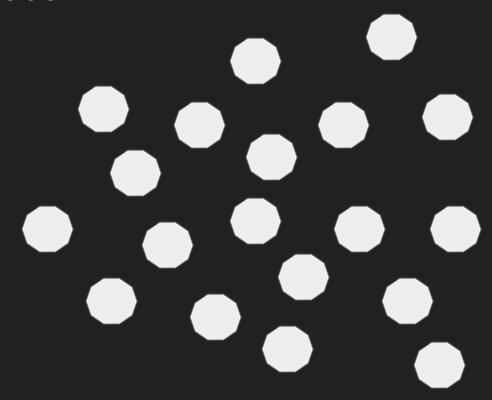

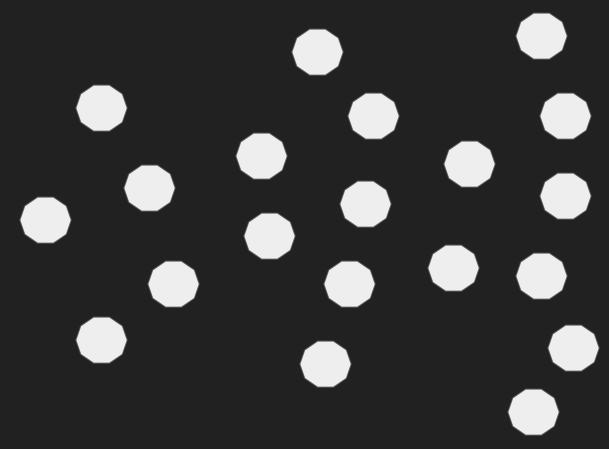

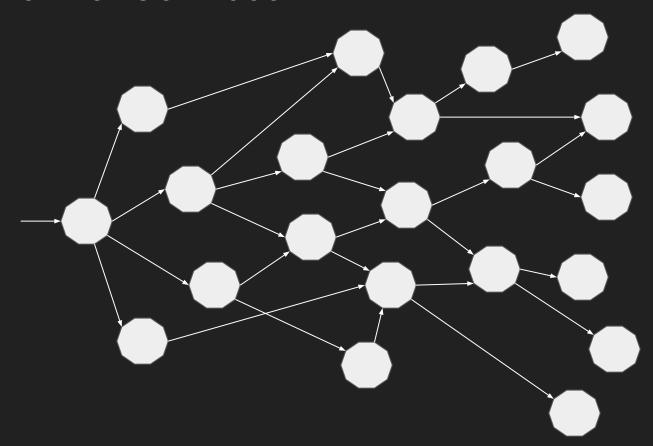

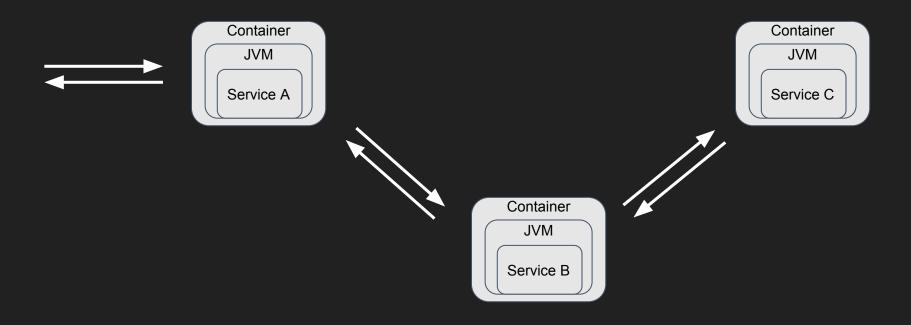

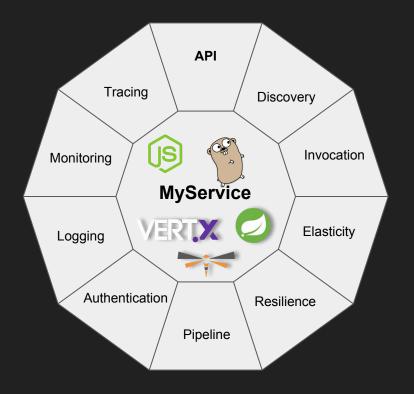

## Network of Services

#### THE THREE PILLARS OF AGILE INTEGRATION

Key foundational capabilities needed by today's enterprises

#### Camel in the Cloud

#### Best Practice - Small in Size

- Camel is light-weight
  - (camel-core 4mb)
  - + what you need
- Single fat-jar via:

#### **Best Practice - Stateless**

- Favour stateless applications
- If state is needed:
  - Data-grid
    - camel-infinispan
    - camel-hazelcast
    - camel-ignite
    - **...**

- Storage
  - camel-sql
  - camel-jpa
  - camel-kafka
  - ...
- Kubernetes
  - Stateful-set

### Best Practice - Configuration Management

- Kubernetes ConfigMap
  - Inject via ENV
  - Inject via files
- Kubernetes Secrets
  - Inject via ENV
  - Inject via files

```
// inject configuration via spring-style @Value
@Value("${fallback}")
private String fallback;

.simple( text: "{{fallback}}")
```

```
$ kubectl get cm -o yaml my-configmap
apiVersion: v1
data:
  fallback: I still got no response
kind: ConfigMap
```

#### Best Practice - Fault Tolerant

- Camel Retry
  - onException
  - errorHandler

- Camel Hystrix
  - circuit breaker

#### **Best Practice - Fault Tolerant**

onException(Exception.class) Camel Retry .maximumRedeliveries(10) onException .redeliveryDelay(1000); errorHandler service ip:port service ip:port service ip:port service ip:port

#### Best Practice - Fault Tolerant

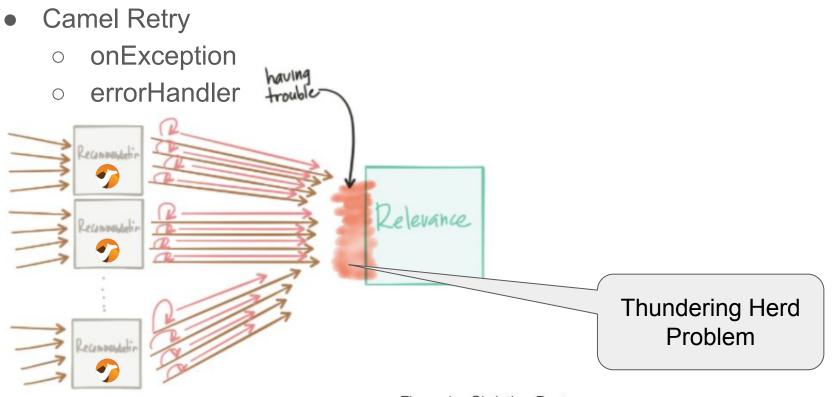

Figure by Christian Posta

#### **Best Practice - Health Checks**

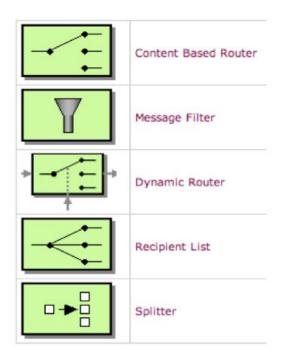

- Health Checks
  - camel-spring-boot actuator
  - wildfly-swarm monitor
- Readiness Probe
  - Kubernetes

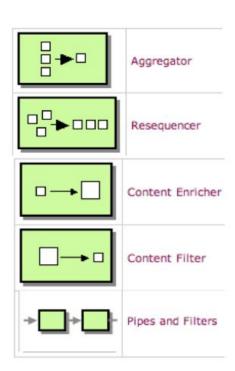

- Liveness Probe
  - Kubernetes

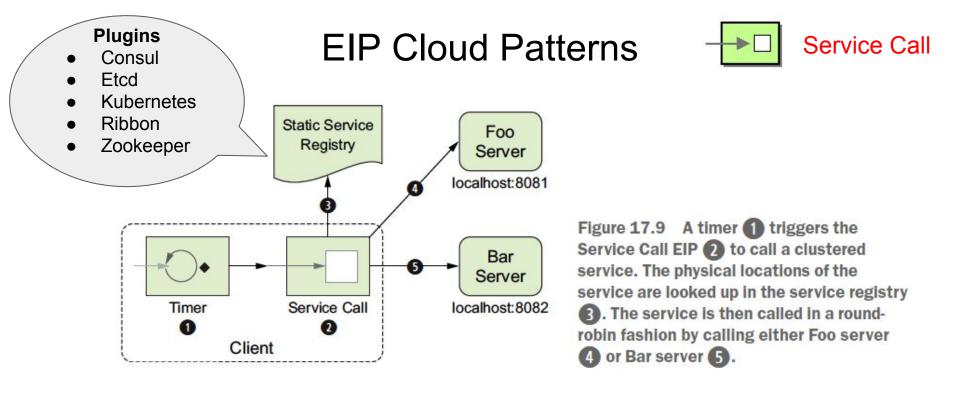

```
i client-hystrix-myproject.192.168.64.4.nip.io/health
      status: "UP",
     name: "camel-1",
      version: "2.20.2",
      contextStatus: "Started",
- camel-health-checks: {
      status: "UP",
      route:routel: "UP",
- diskSpace: {
      status: "UP",
      total: 19195224064,
      free: 5747757056,
     threshold: 10485760,
  },
```

#### Best Practice - EIP Patterns

Works anywhere

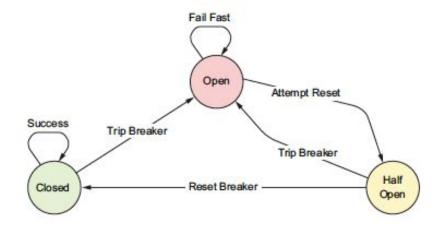

```
from("timer")
    .serviceCall("hello-service");
```

#### **EIP Cloud Patterns**

from("timer:foo")

#### .hystrix()

.to("http:myservice")

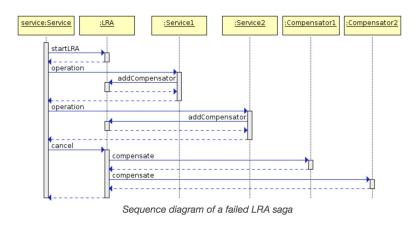

#### .onFallback()

.to("bean:myfallback")

.end()

#### **EIP Cloud Patterns**

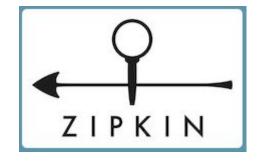

```
rest().post("train/buy/seat")
.saga()
.compensation("direct:cancel")
...
.to("http:trainservice/buy")
```

#### **EIP Cloud Patterns**

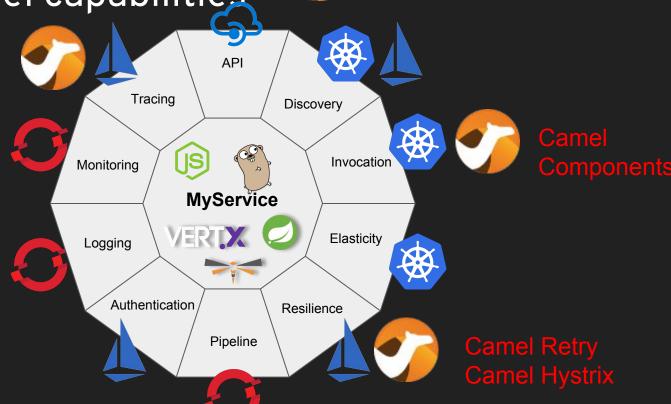

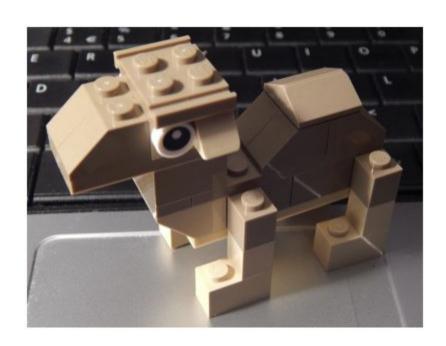

Usable Camel capabilities

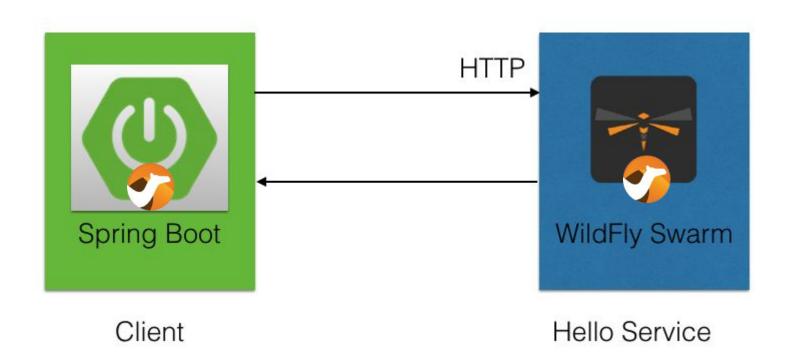

Camel Zipkin
Camel OpenTracing
